1 Introduction

AppCenter PPC/WM 2.0

2 Description

Improvements in the OS release:

AppCenter is an end-user application access control engine that restricts activity to a set

of authorized applications on mobile devices

- Active and passive approach to restricting application activity
- Locks the user out of executing “unauthorized” applications

Presents a launch platform of authorized applications in icon form

- Unauthorized applications terminated
- Typical scenario - kiosk application
- End-user runs ONLY specified application
