

Device Central 3.4

Release Notes – January 2023

Highlights

- **Unpair All Peripherals:** New option to allow the user to unpair all the peripherals at once.
- **RS6100 Bluetooth Wearable Scanner:** New support for pairing/unpairing of RS6100 Bluetooth Wearable Scanner.

Device Support

- **New device support added in this release:** TC58, ET40, ET45, TC73 and TC78 running Android 11

See [all supported devices](#).

New in Device Central 3.4

Unpair All Peripherals

The **Unpair All** button located at the bottom of the peripherals list allows to unpair all peripherals in a single click.

RS6100 Scanner Support

Device Central now supports **RS6100** Bluetooth wearable scanner on Android 10 and 11 devices.

Resolved Issues

- Now Device Central displays other supported scanner information for connected RS507 scanners on Android 11, in addition to the model, manufacturer, device type and MAC address if the installed OS version of the device software is 11-29-18.00-RG-U00-STD-HEL-04 and later.

Usage Notes

- When in Android Multi-user mode, Device Central supports only the Primary user.
- The scanning profile named “DeviceCentral” in DataWedge is used by Device Central and should not be removed or modified. Otherwise, unexpected behavior may occur.
- Only Zebra Bluetooth scanners are listed in the notification drawer in Android. All other devices are listed only in the Device Central main UI.
- The Device Central application must be installed on the device before being configured with Device Central Manager CSP.
- The Device Central application must be installed and launched at least once on the device to receive Smart Leash alerts.
- The serial number for HS3100 Bluetooth headset may be incorrectly reported.
- When connecting a RS6000 scanner, HS3100 headset or another Bluetooth peripheral device that provides battery information, it may take 10-15 seconds for the battery information to appear.

- Users need to wait 2-3 seconds after launching Device Central for the first time to start scanning a barcode that contains the MAC address of a Bluetooth peripheral.

Known Issues

- None

About Device Central

Device Central provides a centralized way for an organization to connect and monitor supported Bluetooth peripherals. Using the simple user interface, Device Central easily pairs and unpairs Bluetooth peripherals, monitors connection status, and provides details on supported peripherals. If supported by the peripheral, additional capabilities may exist such as paging the peripheral or updating the firmware.
